

Violet Rose

Software Engineer

violetartcosmos.github.io | violetzurirose@gmail.com | (920) 610-0224 | Neenah, WI

PROFESSIONAL SUMMARY

Software Engineer with experience developing scalable full-stack applications across healthcare, retail, fitness, and cultural engagement platforms. Proven track record in front-end and back-end development, RESTful API design, cloud-native architecture, and AI-assisted workflows. Featured on CNN Business for DIY cyberdeck building, combining hardware expertise with software engineering.

MEDIA FEATURE

Featured Cyberdeck Builder — [CNN Business](#), “Inside the rise of cyberdecks” (Apr. 2026). Custom cyberdeck build shared under [@abitvalaxy](#) was included in CNN’s video segment on the cyberdeck maker movement.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Ruby, Java, Python, HTML, CSS/Sass

Frameworks: React, Redux, Node.js, Ruby on Rails, AngularJS, Ionic, Cordova, Spring Boot

Cloud & DevOps: AWS, Google Cloud, Git, GitHub, Jenkins, Webpack, Splunk

Testing: Jest, Jasmine, Mocha, Chai, Enzyme, Selenium, Cypress

Data: MySQL, MongoDB, Amplitude

AI & Automation: OpenAI, Claude, AI-assisted development, Twilio integrations

Practices: Agile/Scrum, RESTful API design, CI/CD, automated testing, technical writing, system diagramming

PROFESSIONAL EXPERIENCE

Software Engineer — Planet Fitness

Dec 2024 – Present

- Developed and maintained scalable Ruby on Rails applications supporting Planet Fitness membership systems and operational tools, enhancing performance and reliability.
- Collaborated with cross-functional teams to deliver user-facing features and backend services, streamlining member engagement across digital platforms.
- Integrated AI-powered tools for data-driven insights, including member behavior analysis and personalized workout recommendations, supporting strategic business decisions.
- Optimized application performance and database queries, resulting in a 25% improvement in response times during peak usage periods.
- Configured OpenAI, Claude, Twilio, and other AI platforms to power client-facing chat experiences and automated report generation.

Software Engineer — Rula Health, Remote

Sep 2023 – May 2024

- Led front-end development initiatives for therapy applications, enhancing user experiences across multiple stakeholders using ReactJS, Node, Ruby on Rails, AWS, Amplitude, and TypeScript.
- Increased test coverage by 30% to improve software reliability across the Care team platform.
- Managed therapy applications for scheduling appointments, verifying insurance, and monitoring user analytics.
- Consulted with stakeholders to design systems and determine project limitations, capabilities, and performance requirements.

Software Engineer & CSR — Urban Cultural Arts Center, Green Bay, WI

Apr 2023 – Dec 2023

- Utilized HTML, CSS, JavaScript, and Adobe Creative Suite to optimize website performance and visual appeal, designing captivating web experiences promoting urban culture and community engagement.
- Collaborated with stakeholders to prioritize needs, resolve technical issues, and ensure seamless project delivery.

Software Engineer — Macy's Technology, Atlanta, GA*Jun 2022 – Apr 2023*

- Implemented user-friendly applications for inventory management, enhancing customer experience with ReactJS, Node, Java, and Google Cloud Services.
- Implemented Git-based code reviews for applications to facilitate printing and inventory search operations, creating faster workflows.
- Enhanced user tracking through architecture reviews and added encryption for secure application access.

Software Engineer — Boehringer Ingelheim, Remote*Nov 2021 – Apr 2022*

- Developed and maintained business logic solutions for veterinarian appointment scheduling using React, Node, TypeScript, and AngularJS.
- Designed software solutions and conducted code reviews to ensure adherence to industry standards, analyzing user requirements for feasibility within time and budget constraints.

Software Developer — Cox Automotive, Dunwoody, GA*May 2018 – Nov 2021*

- Assisted 2 teams to develop templated web designs for Autotrader, Kelley Blue Book, Ford, Tesla, and others using ReactJS, Jest, Java, Selenium, Cypress, and Enzyme.
- Implemented UI designs using HTML, CSS, React JavaScript, and Java Spring Boot, enhancing product performance and user interface experience. Managed Agile development projects using Jira.

Software Developer — Aces Health, Atlanta, GA*May 2018 – Nov 2021*

- Implemented UI designs using HTML, CSS, AngularJS, JavaScript, and Cordova for clinical research trials.
- Decreased clinical trial paperwork retrieval by 80% through conversion to a mobile application-based document center.
- Decreased appointment scheduling delays by 65% by replacing mail-based scheduling with a digital workflow.

Software Developer — Rezometry, Miami, FL*Jun 2016 – Apr 2017*

- Utilized Node.js, React.js, and ES6 JavaScript to develop travel customer management systems for a Canadian bus system, integrating backend APIs for new airlines and additional bus data resources.

Additional Experience — Phlebotomist, Biolife Takeda Pharmaceuticals (Sep 2024 – Dec 2024)**EDUCATION**

Ironhack Bootcamp — Web Programming Certification*2016***Broward College** — Associate of Science in Computer Engineering*2013 – 2015*
